Summary

• Experienced in designing and developing scalable backend applications.
• Proficient in Python, JavaScript, and Go with expertise in cloud platforms like AWS and GCP.
• Passionate about DevOps, CI/CD automation, and system architecture.

Experience

TechCorp - Senior Software Engineer (Jan 2022 - Present)
• Developed microservices for high-traffic applications, handling over 1M requests/day.
• Implemented API gateway using Kong for service communication and authentication.
• Optimized database queries, reducing response time by 30%.

Key Contributions:
  Key Achievements:
   • Led the migration from a monolithic system to microservices architecture.
   • Automated infrastructure provisioning with Terraform and Kubernetes.

StartupX - Software Engineer (July 2019 - Dec 2021)
• Developed RESTful APIs using FastAPI and Express.js.
• Integrated payment gateways (Stripe, PayPal) for seamless transactions.
• Implemented caching strategies with Redis for improved performance.

Key Contributions:
  Product Impact:
   • Built a real-time notification system using WebSockets and RabbitMQ.

Education

University of California, Berkeley
  Bachelor of Science in Computer Science (2015 - 2019)

Management Skills:
  Agile methodologies, Sprint Planning, JIRA
Technical Skills:
  Programming:
  Python, JavaScript, Go
  Web:
  Node.js, Express.js, Django, FastAPI
  Databases:
  PostgreSQL, MongoDB, Redis
  Cloud:
  AWS, Google Cloud
  DevOps:
  Docker, Kubernetes, Terraform
  Monitoring:
  Prometheus, Grafana, New Relic
